100+ WASHES

Each year, the United States generates 39 million tons of containers and packaging waste, which accounts for 23% of the municipal solid waste stream.

WITH CUBE PACKAGING, YOU CAN HELP
CHANGE THE STORY.

Sustainability is at our core and we are dedicated to building products that meet both the functional requirements of our customers, as well as the need for environmental responsibility.

RE-USABLES
ARE THE
GREENEST
OPTION!

Doing our part

Over the last few years, CuBE has made significant changes and investments to:

- ✓ Increase energy efficiency
- ✓ Save clean water
- ✓ Use food safe, pre-consumer recycled content
- ✓ Utilize less materials
- ✓ Implement employee sustainability programs
- ✓ Contribute to organizations focusing on sustainability

POST CONSUMER RECYCLED PLASTIC

Innovative materials crafted by collecting, sorting, and breaking down recycled materials into smaller pieces.

HOW DOES IT WORK?

PCR plastic production, commences with the collection of post-consumer waste, through a detailed process involving meticulous sorting, cleaning, reheating, and grinding that creates high-quality PCR pellets. These pellets are then used to make new products.

WHAT ARE THE ADVANTAGES OF PCR?

Utilizing previously manufactured plastic is not only an economical approach but also a method of reducing waste.

- Less use of water, fossil fuels and energy
- Reduction of the amount of waste
- Can be recycled

WHY IS IT EFFECTIVE?

Products made with PCR look and function the same as untreated Plastics in terms of durability, flexibility, and shelf stability.
